## Why upgrade to lift slide from standard sliding doors?

Lift slide allows larger openings with fewer panels than standard sliders. Architects love its flexibility of design for window walls, pocket doors, curved walls, and corner applications. Lift slide maximizes views and brings the outdoors in for applications such as residential and resort patios, balconies, restaurants and many more. Lift slide has lower air and water infiltration than other sliding door options and helps meet Hurricane Test Standards. Because the panels are lifted while they slide, the weather-seal does not wear out from friction. For access and ventilation, panels can lock open at any position.

Sliding doors offer a range of benefits. With their wide openings, extremely narrow frames and extensive glazed areas, they keep rooms light and airy. Opening the doors brings the outside in, without a door standing obtrusively in the way.

1. It is the largest sliding door on the market giving you a unique feature to your home.
2. You get lifetime reliability with its German made mechanism which has been tried and tested for over 30 years
3. Its roller ball bearing system allowing huge panes to easily glide back
4. Its double sealing system and smart drop mechanism ensures you will have excellent air-tightness with no draughts
5. Clean cut design brings an elegant modern touch to your home
6. It's smart drop mechanism means you can lock it at any position
7. You get maximum glass allowing you to get the most of scenic views and maximum light from your home

7.5m wide x 2.7m high 4 part lift & slide door with 1m high toplight

3m wide x 2.5m high lift slide door

2nr 4m x 2.4m high lift & slide doors

6m wide x 2.4m high, 3 part lift & slide door

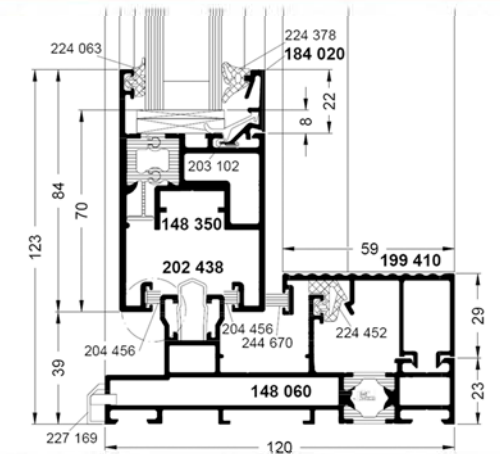

4m wide x 2.2m high lift & slide door with 2m wide sidelight

A lift-and-slide door manufactured by Senator, using the Schüco ASS50 aluminium profile system, is very easy to move. When closed, the door is perfectly weather-tight, providing excellent thermal insulation and sound reduction. Up to three tracks allow large opening widths and the door can therefore be used with great flexibility in large glass construction.
